## **ASSIGNMENT-2**

Build a python code, Assume u get temperature and humidity values (generated with random function to a variable) and write a condition to continuously detect alarm in case of high temperature

```
import random
from time import sleep
def generate_values():
temperature = random.randint(13, 50)
humidity = random.randint(10, temperature)
 return humidity, temperature
humidity = temperature = 0
while temperature < 45:
humidity, temperature = generate_values()
 print('Humidity:', humidity, 'Temperature:', temperature)
sleep(0.50)
print('High Temperature Detected')
OUTPUT:
Humidity: 11 Temperature: 17
Humidity: 14 Temperature: 15
Humidity: 12 Temperature: 41
Humidity: 22 Temperature: 48
```

**High Temperature Detected**
